***Huisking Investments, Inc. v. Commissioner, 4 T.C. 5 (1944)***

Payments to holders of debenture bonds are considered dividend distributions, not deductible interest, if the payment of interest is not absolute and is contingent on the corporation's discretion.

**Summary**

Huisking Investments, Inc. sought to deduct payments made to debenture bondholders as interest expenses. The Tax Court ruled against the company, determining that these payments were actually dividend distributions because the debentures were unsecured, subordinated to other creditors, and, crucially, the payment of interest was not mandatory but at the company's option. The court emphasized that genuine interest on genuine indebtedness must be an absolute obligation, which was absent in this case.

**Facts**

Huisking Investments, Inc. issued debenture bonds. The debentures were unsecured and subordinated to the claims of all other creditors. The terms of the debentures allowed the company to pay or not pay interest at its discretion.

**Procedural History**

Huisking Investments, Inc. deducted payments to debenture holders as interest expense on its tax return. The Commissioner of Internal Revenue disallowed the deduction, arguing the payments were dividends. The Tax Court upheld the Commissioner's determination.

**Issue(s)**

Whether payments to the holders of debenture bonds constituted deductible interest expenses under Section 23(b) of the Internal Revenue Code, or were, in substance, dividend distributions.

**Holding**

No, because the debentures were unsecured, subordinated to other creditors, and, most importantly, the payment of interest was discretionary on the part of the corporation. This lack of an absolute obligation to pay interest indicated that the payments were dividends rather than interest on a true debt.

**Court's Reasoning**

The court acknowledged that various factors are considered when distinguishing debt from equity, including the name given to the instrument, the presence of a fixed maturity date, whether payments depend on earnings, and the credit status of

the holders. However, no single factor is decisive. Here, the court focused on the fact that interest payments were optional for Huisking. The court distinguished this case from others where the obligation to pay interest, though perhaps deferred, was absolute. The court stated, “Stockholders have no absolute right to dividends until they are declared. A creditor has a right to his interest in any event.” The court also noted the circumstances of the debenture issuance, suggesting that the terms were dictated by Huisking and not the result of arm’s-length negotiation. Given that no new capital came into the corporation and the terms favored Huisking’s interests, the court concluded that a genuine debtor-creditor relationship was absent.

**Practical Implications**

This case underscores that the label assigned to a financial instrument (e.g., “debenture bond”) is not determinative for tax purposes. Courts will look to the substance of the transaction to determine whether it constitutes debt or equity. The critical factor highlighted in *Huisking* is the absolute obligation to pay. If a corporation has discretion to pay or not pay “interest,” the payments are more likely to be treated as non-deductible dividends. This ruling informs how businesses structure their financing arrangements and how tax advisors counsel their clients. Later cases applying this ruling would scrutinize similar arrangements to determine if there truly exists an unconditional promise to pay principal and interest, irrespective of the borrower’s profitability or discretion.
