***9 T.C. 455 (1947)***

Advance payments received by a manufacturer from the Defense Plant Corporation (DPC) for machine tools under purchase orders, which were to be repaid upon sale to substituted purchasers, do not constitute borrowed capital for excess profits tax purposes under Section 719 of the Internal Revenue Code, nor do repayments qualify for debt retirement credit under Section 783.

**Summary**

Gould & Eberhardt received advance payments from the DPC for manufacturing machine tools under purchase orders during World War II. The company sought to include these advances as borrowed capital to reduce its excess profits tax liability. The Tax Court held that these advances did not constitute borrowed capital because they were essentially advance payments on government contracts and lacked the risk associated with true indebtedness. Consequently, the repayments of these advances did not qualify for a debt retirement credit.

**Facts**

Gould & Eberhardt, a machine tool manufacturer, received six purchase orders from the DPC for an equipment pool. The DPC advanced 30% of the total purchase price to the company. The company agreed to use the advances exclusively for labor and materials. The company was required to repay the advances as machines were sold to substituted purchasers or upon completion/cancellation of the orders. The DPC retained audit rights and could demand security for the advances. The machine tools were often sold to entities with government contracts, with DPC retaining ownership and leasing the equipment at nominal rates.

**Procedural History**

The Commissioner of Internal Revenue determined deficiencies in Gould & Eberhardt's excess profits tax for 1942 and 1943, disallowing the inclusion of the DPC advances in borrowed capital and the related debt retirement credit. The Tax Court reviewed the Commissioner's determination.

**Issue(s)**

1. Whether the advance payments received from the DPC constitute borrowed capital under Section 719 of the Internal Revenue Code.

2. Whether the repayment of these advances entitles the company to a credit for debt retirement under Section 783 of the Internal Revenue Code.

**Holding**

1. No, because the advance payments were essentially advance payments on

government contracts and did not represent true indebtedness.

2. No, because the advance payments did not constitute indebtedness within the meaning of Section 783, and therefore, their repayment does not qualify for a debt retirement credit.

**Court's Reasoning**

The court reasoned that the DPC was created to acquire critical war materials and not to make loans. The advance payments were a mechanism to facilitate war production, not a form of borrowing. The court emphasized that Gould & Eberhardt assumed no significant risk with respect to these advances, as DPC was obligated to take any unsold machines. The court distinguished this situation from typical borrower-lender relationships, where the borrower assumes the risk of repayment. The court stated, "Here, we are unable to conclude that petitioner assumed any risk whatever with respect to the advance payments. It stood to lose nothing. If risk there was, it would seem to be a risk assumed by DPC rather than by petitioner." Additionally, the court noted that Congress had specifically addressed advance payments on contracts with foreign governments but not with the U.S. government, implying an intent to exclude the latter from the definition of borrowed capital. The court concluded that the term 'indebtedness' should have the same meaning under both sections 719 and 783.

**Practical Implications**

This case clarifies the distinction between advance payments on government contracts and true indebtedness for tax purposes. It highlights that merely receiving funds with an obligation to repay does not automatically qualify the funds as borrowed capital. The key factor is whether the recipient assumes a genuine risk associated with repayment. This decision informs how businesses should treat government advances for tax calculations, particularly in industries heavily reliant on government contracts. This case has been cited in subsequent cases involving the definition of borrowed capital and indebtedness, emphasizing the importance of assessing the underlying nature and risk associated with financial transactions to determine their tax treatment.
