

## ***Standard Television Tube Corp. v. Commissioner, 64 T. C. 238 (1975)***

Prepaid income from warranty contracts must be recognized in the year it is received, not deferred until future costs are incurred.

### **Summary**

Standard Television Tube Corporation, an accrual basis taxpayer, sold television picture tube warranty contracts and sought to exclude from its income the estimated future costs of tube replacement. The IRS disallowed this, asserting that there was no legal basis for such deferral. The Tax Court upheld the IRS's position, ruling that income from warranty contracts must be recognized in the year received, consistent with prior case law rejecting deferral of prepaid income. The court also noted that recent IRS pronouncements did not extend to warranty contracts, and thus could not be relied upon by the petitioner to justify its accounting method.

### **Facts**

Standard Television Tube Corporation sold warranty contracts for television picture tubes, which extended beyond the manufacturer's warranty period. These contracts were sold in full at the time of purchase, and the corporation attempted to reduce its reported gross sales by the estimated future costs of replacing tubes. This practice began in the taxable year ended September 30, 1968, after previously reporting all sales income in the year received.

### **Procedural History**

The IRS issued a statutory notice of deficiency for the taxable years ended September 30, 1968, and September 30, 1969, disallowing the corporation's method of deferring income. The case was brought before the United States Tax Court, which reviewed the issue of whether the corporation could exclude estimated future costs from its current income.

### **Issue(s)**

1. Whether an accrual basis taxpayer may exclude from its current gross sales the estimated future costs of fulfilling warranty contracts.
2. Whether such a taxpayer may increase its cost of goods sold by adding estimated future costs of fulfilling warranty contracts.

### **Holding**

1. No, because the Internal Revenue Code does not permit the deferral of income from warranty contracts until future costs are incurred.
2. No, because the accrual method of accounting does not allow for an increase in the cost of goods sold based on estimated future costs.

## **Court's Reasoning**

The court relied on established case law that consistently rejected the deferral of prepaid income, such as *Schlude v. Commissioner* and *American Automobile Assn. v. United States*. The court emphasized that income is taxable in the year it is received, regardless of future obligations. The court also considered the nature of warranty contracts as more akin to insurance than to the sale of goods or services, which further supported its conclusion that recent IRS pronouncements on deferral of income did not apply. The court noted that these pronouncements explicitly excluded warranty contracts, and thus could not be used by the petitioner to justify its accounting method. The court concluded that the corporation's attempt to defer income constituted an impermissible change in its method of accounting without the required consent of the Commissioner.

## **Practical Implications**

This decision reaffirms that prepaid income from warranty contracts must be recognized in the year of receipt, impacting how companies that sell such contracts report their income. Businesses must be cautious in attempting to defer income based on estimated future costs, as such practices are not supported by the Internal Revenue Code or current IRS regulations. This ruling may influence companies to adjust their accounting practices to align with the requirement to report all income in the year it is received. Subsequent cases and IRS guidance continue to refine the treatment of prepaid income, but this case remains a significant reference for understanding the taxation of warranty contracts.
