***Klein v. Commissioner, 70 T. C. 306 (1978)***

In the complete liquidation of a subchapter S corporation, a shareholder/creditor's net operating loss deduction is determined before any reduction in basis due to liquidating distributions.

**Summary**

In Klein v. Commissioner, the Tax Court addressed how to calculate a shareholder/creditor's net operating loss deduction in the context of a subchapter S corporation's complete liquidation. Sam Klein, a shareholder and creditor of Midwest Fisheries, Inc. , sought to deduct his share of the corporation's net operating loss. The court ruled that Klein's deduction should be calculated based on his total investment before any reduction from liquidating distributions, allowing him to claim the full loss. This decision emphasizes the timing of basis reduction in subchapter S liquidations and aligns with the legislative intent to treat small business corporations similarly to partnerships.

**Facts**

Sam Klein was a shareholder and creditor of Midwest Fisheries, Inc. , an electing subchapter S corporation. In 1972, Midwest decided to liquidate completely, selling assets to State Fish, Inc. and distributing remaining assets, including a promissory note, to its shareholders/creditors. Midwest incurred a net operating loss of $361,952. 80 during its final taxable year. Klein's basis in Midwest's stock was $40,762. 78, and his basis in Midwest's notes payable to him was $309,327. 72. The dispute centered on whether Klein's share of the net operating loss should be calculated before or after reducing his basis due to the liquidating distribution.

**Procedural History**

The case was submitted fully stipulated to the U. S. Tax Court. The court's focus was on the sole remaining issue after concessions: the extent to which liquidating distributions reduce a shareholder/creditor's basis for computing the net operating loss deduction under section 1374(c)(2).

**Issue(s)**

1. Whether a shareholder/creditor's net operating loss deduction in a subchapter S corporation's complete liquidation should be calculated before or after the reduction of basis due to liquidating distributions?

**Holding**

1. Yes, because the court determined that the net operating loss deduction should be calculated based on the shareholder/creditor's total investment before any reduction from liquidating distributions, aligning with the legislative intent of subchapter S.

## Court’s Reasoning

The Tax Court rejected the Commissioner’s argument that state law should govern the issue, focusing instead on federal tax law. The court noted that the simultaneous nature of the distributions to Klein as a creditor and shareholder should not be determinative, drawing on previous rulings like Adams v. Commissioner and Kamis Engineering Co. v. Commissioner. The court emphasized that subchapter S aims to treat small business corporations similarly to partnerships, allowing shareholders to deduct corporate net operating losses up to their investment. The court found that Klein’s total investment (stock and debt) exceeded his share of the loss, and thus, he should be entitled to the full deduction. The decision also considered policy implications, noting that denying the deduction would contradict the “at risk” limitation’s purpose and could lead to unintended tax consequences.

## Practical Implications

This ruling clarifies that in the liquidation of a subchapter S corporation, shareholders/creditors should calculate their net operating loss deductions before any basis reduction from liquidating distributions. This approach aligns with the legislative intent to treat subchapter S corporations similarly to partnerships. Practically, this means that tax professionals advising clients with interests in subchapter S corporations should ensure that net operating loss deductions are calculated based on the shareholder’s total investment before considering any liquidating distributions. This case has influenced subsequent tax rulings and has implications for how shareholders and creditors structure their investments and plan for potential losses in subchapter S corporations.
