

Rensselaer Polytechnic Institute v. Commissioner, 79 T. C. 967 (1982)

Indirect expenses of a dual-use facility operated by a tax-exempt organization can be allocated based on the time of actual use for both exempt and unrelated business activities.

Summary

Rensselaer Polytechnic Institute, a tax-exempt educational organization, sought to allocate indirect expenses of its fieldhouse between exempt educational activities and unrelated commercial events. The Tax Court ruled that the allocation based on actual use was reasonable under IRS regulations, affirming the use of a time-based formula. The court upheld one adjustment regarding the inclusion of ice resurfacing hours but rejected adjustments for maintenance and downtime, emphasizing the principle of consistent treatment in allocation formulas.

Facts

Rensselaer Polytechnic Institute (RPI), a nonprofit educational institution, operates a fieldhouse used for both educational activities and unrelated commercial events like Disney on Parade and Ice Capades. In the fiscal year ending June 30, 1974, the fieldhouse generated \$476,613 in gross receipts from unrelated activities, with direct costs of \$371,407. RPI incurred \$301,409 in indirect expenses, and the dispute centered on how to allocate these expenses between exempt and unrelated activities. RPI proposed allocating based on the ratio of hours used for commercial events to total hours of use, while the IRS suggested different methods for fixed and variable expenses.

Procedural History

RPI filed a petition challenging the IRS's determination of a \$12,653.13 deficiency in federal income tax. After concessions, the sole remaining issue was the proper method for allocating indirect expenses. The case was heard by the United States Tax Court, which issued its decision in 1982.

Issue(s)

1. Whether the allocation of indirect expenses based on the time of actual use of the fieldhouse is reasonable under section 1.512(a)-1(c) of the Income Tax Regulations.
2. Whether adjustments to RPI's computation of total hours of use for the fieldhouse are justified.

Holding

1. Yes, because the court found that an allocation based on actual use is reasonable within the meaning of the regulation, consistent with prior case law.
2. Yes, because the court upheld the adjustment for ice resurfacing hours but

rejected adjustments for maintenance and downtime, ensuring consistent treatment in the allocation formula.

Court's Reasoning

The court applied section 1. 512(a)-1(c) of the Income Tax Regulations, which requires a reasonable allocation of expenses for facilities used for both exempt and unrelated activities. The court found that RPI's method of allocation based on actual use was reasonable, citing previous cases like *International Artists, Ltd. v. Commissioner* and *Gino v. Commissioner*, which upheld similar allocations. The court rejected the IRS's argument for different allocation methods for fixed and variable expenses, emphasizing that the facility was equally available for both uses during non-use periods. The court also addressed adjustments to the total hours of use, upholding the inclusion of ice resurfacing hours for consistency but rejecting adjustments for maintenance and downtime, as these did not directly relate to specific activities. The court noted that the Ninth Circuit's reversal of *Gino* was based on administrative deference rather than the merits of the allocation method, reinforcing the Tax Court's position.

Practical Implications

This decision provides clear guidance for tax-exempt organizations on allocating indirect expenses for dual-use facilities. Practitioners should focus on actual use time for allocation, ensuring consistency in treatment of all hours, including those related to maintenance activities directly tied to specific events. The ruling may affect how similar cases are analyzed, potentially leading to more straightforward allocations and less IRS scrutiny. Businesses and organizations operating dual-use facilities should carefully track usage hours to support their allocation methods. Subsequent cases, such as those involving home office deductions, have continued to apply this principle, underscoring its enduring relevance in tax law.
